

Jodel Build and Completed Pictures

A View of our Jodel from above front without canopy & cowl in place.

And with the canopy & cowl in place.

Inverted views showing built up structure of both wing & fuselage prior to final sheeting of wing & fuselage. This one was fitted with a snake for the rudder as a test, the kit is supplied with closed loop linkage for the rudder.

This all build structure is surprisingly easy to construct & in a relatively short time.

The completed aircraft (after first flight tests)

And finally, Eddie enjoying the fruits of his labours on the Beach.
